## BAKED PRODUCTS

### Application

Monde M.Y. San maintains the strict quality assurance of their products, serving local and international markets. Various products are tested in their Quality Control Laboratory daily, requiring speed and accuracy. With bulk production and high testing demand for their baked products, CompactDry™ helps Monde M.Y. San optimize their testing capacity by providing accurate results in less time, enabling the timely release of their products to the market. CompactDry™ ready-to-use chromogenic media plate eliminates the laborious media preparation and sterilization processes, and significantly reduces the turn-around time for microbiological testing, while maintaining the accuracy of its results.

Monde M.Y. San tests their baked products using CompactDry™ for Aerobic Count (TC), Yeast and Mold (YM), *Staphylococcus aureus* (XSA), and Coliforms (CF).

### Validation

Applicable for membrane filtration samples

Aerobic count

Yeast & Mold

Produced to detect highly targeted microorganisms, CompactDry™ is approved and validated by international accrediting bodies, the AOAC International, MicroVal, and NordVal International. CompactDry™ plates can be used for end-product testing of solid and liquid samples, membrane filtration, surface sampling, hand swabbing, and air sampling.
