Thailand Poultry Exporter

The biggest Thai exporter of frozen with 22% market share of the total export

Issues

Enterococcus spp is one of well known bacteria related to the Poultry.

It is known as drug-resistant bacteria, particularly, VRE (Vancomycin Resistant Enterococci).

One of the reasons why is because the drug called "Avoparcin" was included, whose structure was similar to Vancomycin, in the animal feed in order to grow faster poultry.

Currently, most countries prohibit using Avoparcin, however, the VRE is still existing in poultry, and it is thought to be in chicken meat, sometimes.

VRE (Vancomycin Resistant Enterococci)

CompactDry

CompactDry is the ready to use media which already prepares necessary ingredients for the target bacteria. There are not only hygiene indicator bacteria but also several pathogens in the lineup.

CompactDry Enterococcus (ETC) is validated by the international accreditation body. It was suitable for Thailand Poultry Exporter to do daily screening detection test on their poultry products.

MYP agar medium

Applications

Thailand is one of the TOP5 export countries of Poultry followed Brazil and USA in the world. There are about 20 of Poultry Exporter in Thailand. Comparing to conventional method, top 10 exporters trust and choose to use CD ETC as it rapid, easy with reliable result which can be proved from international approval. They register CD ETC as one of method in their Laboratory ISO 17025.

All poultry exporters require to apply ISO 17025 for their laboratory in order to get approval from the Industrial Standards Institute (TISI), Department of Livestock Department (DLD) and Bureau of Laboratory Quality standards

The processed products mainly to Asia and Europe currently.

CompactDry ETC, Aerobic Count (TC) and Coliforms/E.coli (EC).
