Issues

Asha is a non-profit organization, aiming at contributing to the formation of a society that respects human dignity, and implements rural development support projects related to human rights, poverty, environment and welfare to rural residents in North India. One of such projects is to help poor rural women improve their income. Asha is encouraging cultivation of Moringa plants and their leaves processing, especially making its leaf powders. The products are marketing in India as well as to Japan.

Moringa is regarded as a superfood containing a variety of nutrients in good balance, and therefore more popular among health conscious people. Asha reached CompactDry after considering how to perform accurate testing with limited equipment and personnel in a rural setting. CompactDry is used for microbiology testing of Moringa leaf powders to improve their manufacturing processes and in-process quality monitoring, and to offer high quality products into the market.

Moringa Fresh Leaves

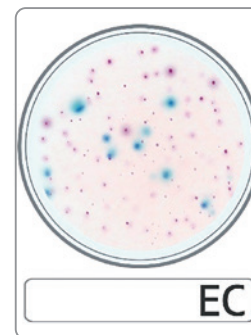

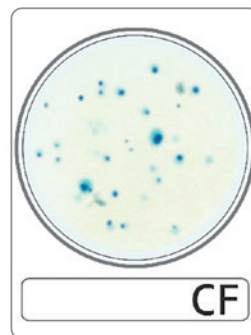

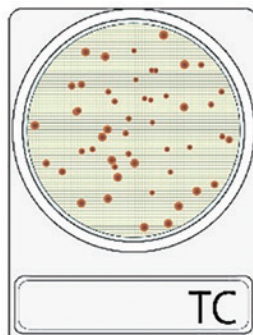

Dry Leaf Powder

CompactDry

Four key reasons they decide to adopt Compact Dry

- ① Reliability (no failure. Performance is validated by MicroVal, NordVal and AOAC)
- ② Ease to use (no media preparation, short working time)
- ③ Room temperature storage
- ④ Long shelf life (18 months from manufacture)
